MATIN QASEMI

Python Backend Developer — Django, REST APIs & Database Design

Open to International Opportunities / mwtinqasemi@gmail.com/ / github.com/Mwtinqasemi /

linkedin.com/in/matin-qasemi-81370b392

Summary

Python Backend Developer with hands-on experience in designing and developing web applications using Django and Django REST Framework. Experienced in relational database design, RESTful API development, authentication and authorization systems, and application business logic.

Developed multiple software projects, including a blog platform, an e-commerce marketplace, and an appointment booking system. Familiar with PostgreSQL, MySQL-based database systems (MariaDB), MongoDB, Redis, Docker, Linux, and Git.

Strong foundation in object-oriented programming, data structures, algorithms, and software engineering principles. Also experienced in software design documentation, system modeling, and cross-functional product development through participation in a nationally recognized software project.

Core Skills

Backend Development: Python, Django, Django REST Framework, RESTful APIs, API Design, Authentication, Authorization

Programming Languages: Python, C++, Java (Practical), C

Databases: PostgreSQL, MariaDB, MongoDB, SQLite, SQL, Relational Database Design, Data Modeling

Tools & Infrastructure: Git, GitHub, Linux, Docker, Redis

API Development & Testing: Postman, Swagger, OpenAPI, API Documentation

Web Technologies: HTML, CSS, JavaScript

Software Engineering: Object-Oriented Programming, Data Structures, Algorithms, Modular Design, Software Design Principles, Software Testing, System Modeling

Selected Projects

Blog Platform — Backend Developer

Python, Django, Django REST Framework, PostgreSQL, HTML, CSS

- Developed a modular blog platform using Django with separate applications for user accounts, articles, and other platform components.
- Designed relational database models and relationships between posts, categories, and tags.
- Implemented user account and profile management functionality.
- Developed backend functionality and REST API components.
- Integrated API documentation and structured the application for maintainability and future development.

E-commerce Marketplace — Backend Developer

Python, Django, PostgreSQL, HTML, CSS

- Designed and developed a web-based marketplace using Django.

- Implemented core backend components and application business logic.
- Designed database models and relationships between different application entities.
- Developed server-side functionality for managing application data and operations.

Appointment Booking System — Backend Developer

Python, Django, Django REST Framework, PostgreSQL, JavaScript, HTML, CSS

- Designed and developed an appointment booking system with time-slot management functionality.
- Implemented REST APIs for retrieving available time slots and managing booking requests.
- Developed a temporary booking hold mechanism using unique booking tokens and expiration timestamps.
- Implemented user registration, authentication, appointment management, and cancellation functionality.
- Designed relationships between users, reservation days, and booking records.
- Integrated API documentation using Django REST Framework Spectacular.

Additional Programming Projects

Huffman Compressor — Python

Implemented a data compression utility based on Huffman Coding, applying data structures and algorithmic concepts.

Expression Evaluator — C++

Developed an expression processing and evaluation program using C++ and algorithmic programming concepts.

Employee Management System — C++

Developed an employee management application using object-oriented programming principles.

Teamwork & Achievements

RailBot — Intelligent Railway Passenger Assistant

Problem-Oriented Competition: Rahi Sho | Six-Member Team | Backend Developer & Software Design Contributor

- Contributed to backend development and integration with AI/NLP components in a six-member multidisciplinary team.
- Designed and documented system architecture diagrams and prototype schematics, including state diagrams and workflow diagrams.
- Oversaw adherence to software design principles and the structured five-stage product development process.
- Collaborated with AI/NLP and frontend team members throughout the product development lifecycle.
- Achieved 3rd Place Nationally in the Rahi Sho Problem-Oriented Competition, earning membership in the Iran National Elites Foundation as a result.

Education

Bachelor of Science in Computer Engineering
University of Urmia, Iran
September 2022 – June 2026
